Note re Pricing:

Price for the current year cannot be discussed as it would breach commerce law in some member countries.

Notes re Polish Production estimates 2012 harvest:

The newly formed Polish Growers Association is now working with the Polish government and processor groups to establish a common measuring system. In 2012 the Polish government estimate was 130,000 tonnes/ grower estimate 90,000.

Russia: No statistics available for

Russian production as growers not required to keep specific fruit type statistics.

IMPORTANT: The above figures are collated from estimates provided by country representatives. In some instances they are projections and should not be taken as absolutes. For many reasons, actual production can vary from the figures shown and the International Blackcurrant Association can't accept any responsibility for the accuracy of them: they should be treated as estimates provided in good faith but not necessarily correct.
